

Pseudo Code

#4 Cockroach

1/11/21

Note: The input is a real number (actual type is language dependent) and is ≥ 0 . The result should be an integer.

Set regular function to Cockroach, Speed with parameter/argument of S

Return a method that will give you an integer rounded down, then multiply S by 100,000 because there are that many cm in a km, then divide by 3600, cause there are 3600 seconds in a hour
