input
function called repeat_str
which repeats the given
string src exactly count
times.

Function

output
repeatStr(6, "I") // "IIIIII"

1. set function statment to repeatStr
with parameters/arguments n, s

2. return s parameter with
string.prototype.repeat(), the repeat
method returns a new string with a
specified number of times the string gets
repeated..... The param n would go in the
spot that would indicate the amount of
times the string is repeated
